DUO-CHEK® High Performance  
Non-Slam Check Valves

**CRANE**

Energy Flow Solutions

[www.craneenergy.com](http://www.craneenergy.com)

## Key Features and Typical Applications

### Key Features & Benefits

- ❶ Dual-plate designs that are compact and lightweight for efficient seating, operation and lower installation cost
- ❷ Independent springs with long legs to prevent seat scrubbing and provide non-slam performance
- ❸ Retainerless valve design without body penetration for critical service applications

Double Flanged (Retainerless)

### Typical Applications

- Petroleum Refining
- Oil and Gas Production
- Chemicals and Petrochemicals
- Power Generation
- Steel/Primary Metals
- Marine
- Water and Wastewater
- Pulp and Paper

## Duo-Chek® The High Performance Non-Slam Check Valve

Duo-Chek® high performance non-slam check valves are the original Mission Manufacturing Company wafer check valves introduced to the market in the late 50's. The valve is available in the sizes, pressure classes and configurations required to meet the most demanding of applications. Product range includes, but is not limited to:

- Sizes: 2" to 88"
- ASME Pressure Class 125 through 2500
- API 6A and 6D pressure classes
- DIN, JIS, BS, AS, and ISO standards are also available
- Wafer, lug, double flanged and extended body styles
- Wafer configurations available in retainered and retainerless style
- Body Materials:
  - Cast Iron, Carbon Steel, Stainless Steels, Duplex Stainless Steel, Super Duplex
- Resilient Seat Materials:
  - EPDM, Buna-N, Neoprene, and Viton-B®
- Integral and overlaid metal seats also available
- End Connections:
  - Raised Face, Plain Face, Ring Joint, Weld-End, Hub-End

Viton® is a registered trademark of DuPont Performance Elastomers L.L.C.

Industry Standards*	
API 594	Valve Design
API 598	Valve Pressure Testing and Inspection
ASME B16.5 & B16.47	Flanges
ASME B16.34	Pressure/Temperature Ratings
API 6D	Pipeline Valves
API 6A	Production Valves
(PED) 97/23/EC	Pressure Equipment Directive

\*Consult factory for other specification requirements.

Wafer Style H (Retainerless)

## Specify Duo-Chek® ...to your Advantage

Leading engineers specify Duo-Chek® for check valve applications because it provides high performance. Extensive research and testing with demonstrated performance has earned worldwide recognition, unmatched in the industry.

The Duo-Chek® wafer valve design is generally stronger, lighter, smaller, more efficient and less expensive than conventional swing check valves. Its design meets API 594 which is approximately one fourth the face to face dimension and 15% to 20% the weight, on most popular sizes, making them less expensive than a swing check valve. It is much easier to install between standard gaskets and line flanges. The savings compound during installation due to ease of handling and only one set of flange studs is required. Therefore, it is more cost effective to install, and also to maintain.

The Duo-Chek® also offers special design features that make it a high performance non-slam check valve. These include a scrub-free opening, and in most sizes a unique independent spring design as well as an independent plate support system. These features may not be found in other check valves. Other configurations offered include lug, double flange and extended body.

Plates in closed position. Top view.

Heel opens first as flow begins.

Plates fully opened (85°)

Plate toe closes first as flow decreases.

Plates fully seated for bubble-tight shutoff.

The innovative dual-plate design of the Duo-Chek® employs two spring-loaded plates (disc halves) suspended on a central vertical hinge pin. As flow begins, the plates open in response to a resultant force ( $F$ ) which acts as the center of the sealed surface area. The contact point of the reacting spring leg's force ( $F_s$ ) acts beyond the center of the plate area, causing the heel to open first. This prevents rubbing of the seal surface prior to normal plate opening, eliminating wear.

As the velocity of flow decreases, torsion spring action reacts automatically. This moves the plates closer to the body seats, reducing the distance and time of travel for closure. By having the plates closer to the body seats at the time of flow reversal, the valve dynamic response is greatly accelerated. This dramatically reduces the water hammer effect for non-slam performance.

At closing, the point of spring force causes the toe of the plates to close first. This prevents dragging of the heels of the plates and maintains seal integrity for much longer periods.

### Independent Spring Design

A spring design of the Duo-Chek® (sizes 6" and larger) allows higher torque to be exerted against each plate with independent closing in response to the process stream. Testing has proved this action provides up to 25% improvement in valve life and 50% reduction in water hammer.

Each of the dual plates has its own spring or springs, which provide independent closing action. These independent springs undergo less angular deflection, only 140° as compared to 350° for conventional springs with two legs.

### Independent Plate Suspension Design

The Duo-Chek® unique hinge design reduces friction forces by 66%, which improves valve response significantly. Support sleeves are inserted through the outboard hinges so that the upper hinge is independently supported by the lower sleeve during valve operation. This allows both plates to close at the same time for quick response, and excellent dynamic performance.

## Design Features

Features	Benefits
<b>Lightweight and Compact Wafer Design</b>	Installs between mating flanges with 10 to 20% the weight of flanged swing checks in popular sizes - <b>Saves money in initial valve cost and provides lower installation cost.</b>
<b>Dual Plate, Flat Seat Design</b>	Plate heel is lifted first by design to prevent seat wear. Employs two spring-loaded plates with flat seats - <b>Gives superior performance and tight shutoff to meet industry standards.</b>
<b>Independent Spring Action</b>	Maximum deflection of 140°, provides improved valve response and longer life - <b>Saves money with longer valve life and improved system performance by reducing water hammer.</b>
<b>Independent Plate Suspension with Unique Hinge Design (larger sizes)</b>	Improves valve response and reduces friction forces by 66% - <b>Further assurances of non-slam performance with faster valve response.</b>
<b>Simple, External Body Geometry</b>	Configuration simplifies valve insulation - <b>Saves money.</b>
<b>Variety of Body Designs Available Lug and Double Flange</b>	Provides options to suit application needs - <b>Eases your selection process by utilizing the industry leader as your single source.</b>
<b>Wide Variety of Materials</b>	Versatility for many services - <b>Satisfies more application needs.</b>
<b>Flexibility in Installation Position</b>	Provides more rigidity than pipe, eliminating concerns of pipe bending loads of flanged valves - <b>Safety against thermal or seismic catastrophes.</b>
<b>Body Strength and Rigidity</b>	Some sizes suitable for horizontal or vertical up positions - <b>Simplifies piping design, eliminates constraints that swing checks create.</b>
<b>Retainerless Duo-Chek® Design Eliminates Body Penetrations</b>	For critical service applications, prevents possible escape of unwanted and/or hazardous materials to atmosphere - <b>Provides safety in critical services by eliminating environmental concerns. Standards in Lug and Double Flange Designs.</b>
<b>Vertical Hinged Design</b>	In horizontal position flow allows plates to function freely and full open under lower flow conditions as compared to swing check - <b>Reduces pressure loss, improves dynamic response and eliminates valve chatter.</b>
<b>Special Valves Meet Market Needs:</b> <ul style="list-style-type: none"> <li>• Special Lined</li> <li>• Hub Ends</li> <li>• Weld Ends</li> <li>• PED Certified (CE)</li> <li>• Low Temperature Applications - Cryogenic</li> <li>• ABS Certified</li> <li>• CRN Registration</li> </ul>	Wide size range, pressure range and added options allow further market needs to be met - <b>Reliance on world's largest wafer check line to supply more needs.</b>

## Applications

### Oil and Gas Production

Centrifugal Compressor Discharge  
Fire Water Lines  
Oil/Steam Separation  
Steam and CO<sub>2</sub> Injection  
Gas/Oil Gathering Systems  
Flowlines  
Wellheads  
Regasification  
Liquifaction

### Power Generation

Steam  
Condensate  
Boiler Feed Pumps  
Cooling Towers  
Service Water Recirculators  
River Water Intake

### Petroleum Refining

Hydrogen  
Cracking  
Steam  
Crude Oil  
Gasoline  
Visbreakers  
Naphtha  
Sulfur

A wide variety of body designs, materials, and trim make Duo-Chek® valves exceptionally versatile and suitable for a multitude of liquid and gas fluid applications.

Some of the major markets and typical applications are depicted here.

### Petrochemicals

Ethylene  
Propylene  
Steam  
Reboilers  
Gases

### Chemicals

Chlorine  
Phosgene  
Aromatics  
Polymers  
Acids  
Air Separation  
Caustics

## Applications

### Water and Wastewater

Distribution Lines  
Pumping Stations  
Sewage Plant Blower Discharge  
Chemical Treatment  
Fire Protection Systems  
HVAC Systems  
Desalination

### Steel/Primary Metals

Quench Lines  
De-Scaling  
Continuous Casters  
Steam  
Condensate  
Strippers  
Electro-Galvanizing

### Pulp and Paper

Bleaching Lines  
Black Liquor  
Green Liquor  
White Water  
Steam  
Chemical Recovery

### Marine

Oil Tankers  
Tanker Loading Terminals  
Offshore Platforms  
Sub-Sea Manifolds  
Terminal Transfer Lines  
Barge Unloading Lines  
Shipboard Services

## Valve Configurations

### Style G

#### Retainered Wafer

Sizes 2" – 88"

- ASME Classes 125 – 2500
- Retainered Wafer Design
- Dimensions pages 13–14

### Style H

#### Retainerless Wafer

Sizes 2" – 88"

- ASME Classes 150 – 2500
- Dimensions pages 13–14

#### Retainerless Wafer Double Flange Valves

Sizes 8" – 88"

- ASME Classes 150 – 900
- Sizes & Dimensions page 15

#### Retainerless Wafer Lug Valves

Sizes 2" – 24"

- ASME Classes 150 – 2500
- Sizes & Dimensions page 16

### Style X

#### Extended Body Wafer

Sizes 10" – 54"

- ASME Classes 150 – 2500
- Designed for extremely fast opening conditions
- Sizes & Dimensions page 17

## Specials

### Hub End Valves

Valves with Hub ends may be furnished for use with hub end, clamp-style connections. These end connections simplify installation procedures in systems that utilize them. Please contact your sales office for information regarding sizes and pressure ratings available, and other hub end connections such as Spolock, Seaboard Lloyd, etc.

### Butt Weld Valves

Valves with butt weld ends may be furnished for piping systems designed for welded system components to eliminate potential joint leak paths. See Ordering Information for proper figure number designation, so that weld-end preparations match the mating pipe schedules.

### Cryogenic Valves

Duo-Chek® valves may be furnished for subatmospheric to cryogenic temperatures -58°F through -321°F (-50°C through -196°C). Special materials of construction such as low temperature alloy steels, austenitic stainless steel, aluminum bronze or Monel® are generally required.

### Coated & Lined Valves

Duo-Chek® valves may be furnished with linings, when specified, for abrasion or corrosion resistance. Linings include Natural Rubber, Neoprene, and others. All body surfaces of lined valves are covered with the specified material, eliminating the need for gaskets. Hinge and stop pin holes are encapsulated to seal them against line fluids.

Solid alloy valves are recommended for extremely corrosive applications. A variety of coatings may be provided on request to resist corrosion or abrasion. Some of the commonly specified coatings include epoxies, coal tar derivatives and sacrificial zinc primers. Please discuss your requirements with your sales office.

### Other Specials

Other Duo-Chek® specials furnished include:

- Valves to comply with NACE MR0103
- Valves cleaned for liquid oxygen (LOX) service
- Valves prepared for Food Service (austenitic stainless steel)
- Special testing for valves, including radiography, magnetic particle, dye penetrant, ultrasonic, helium leak, etc.

Monel® is a registered trademark of Special Metals Corporation.

### Figure Number System

Size	Style	Pressure Class	Body & Plate	Seal	End Connection	Body Configuration	Modification Number
<b>24"</b>	<b>H</b>	<b>15</b>	<b>S</b>	<b>P</b>	<b>F</b>	<b>3</b> -	<b>9</b>

**DESCRIPTION:** 24" Style H, ASME Class 150, Carbon Steel Body, Metal Seal, raised face flanges, with double flange body, (modification number indicates Inconel® X spring)

Valve Size	Style
Nominal valve sizes are expressed in inches or millimeters.	Ordering Letter
<b>In Inches:</b> For use with ASME, API and B and A Flange Standards.	Body Type
<b>In Millimeters:</b> For use with DIN, or JIS rated valves (size preceded by "M" for DIN, or "J" for JIS).	Size Range
	H Retainerless Duo-Chek® Design Wafer, Lug or Double Flange 2" through 88" (50mm through 2200mm)
	G Wafer, Retainered 2" through 88" (50mm through 2200mm)
	X Extended Body Design 10" through 54" (150mm through 1350mm)
	W* Bodies with Integral Weld-Ends 2" through 72" (50mm through 1800mm)

\*Weld-end valves also require the additional designation of the pipe schedule they are designed to fit.

Pressure Classes							
ASME		API <sup>Δ</sup>		DIN / JIS <sup>1</sup>		BS / AS <sup>2</sup>	
Ordering No.	Class	Ordering No.	Class	Ordering No.	PN Rating	Ordering No.	Table
12	125	21	2000	Flange Standard:	6	B - BS A - AS	A thru T
15	150				10		
25	250	31	3000	M - DIN	16		
30	300				25		
40	400	51	5000	J - JIS	40		
60	600				64		
90	900	101	10000		100		
150	1500				160		
250	2500	151	15000		250		
450	4500				320		

Δ API Class is shown in psig, cold working pressure.

1 Metric valves with DIN or JIS standard flanges are designated by having the nominal size expressed in millimeters, preceded by "M" or "J". Flange ratings in PN numbers are then listed after the valve style, as in ASME or API Valves.

### Example: M 100 (4") G16 SPF -9

Flange Standard (M - DIN) (J - JIS) 100mm Size

Pressure Rating, PN for DIN or JIS (in bars)

This specifies a metric valve, designed to fit between DIN flanges. Nominal size is 100 millimeters (corresponding to 4"), Style G Duo-Chek® with a pressure rating of 16 bars, carbon steel body and plate, metal seat, raised face end connections and Inconel® X spring.

2 Valves designed for use with British Standard 10 or Australian Standard 2129 are defined by adding two letters between the style of construction and pressure rating. First letter designates the standard, and the second letter denotes the table in that standard.

### Example: 6" G B E 15 BNF

Flange Standard B - British Std. 10 A - Std. 2129

ASME Class is made from

Table in corresponding Standard

Figure number lists a 6" Style G Duo-Chek®, designed to fit between British Standard 10, Table E Flanges, using a Class 150 Valve, having an aluminum bronze body and plates, Neoprene seal and raised face end connections.

## Retainerless Check Valves

### Style H†

### High Performance Check Valve for Critical Applications

For critical applications, Duo-Chek® Retainerless Check valves Style H feature a one-piece body with no pin retainer penetration through the body.

These high performance valves utilize the same internal design of other Duo-Chek® valves with all the unique features and advantages built into them. The photo shown is a wafer valve however, designs apply to wafer, lug and double flange.

Item No.	Part No.
1	Body
2	Plate
3	Seal
4	Stop Pin
5	Hinge Pin
6	Spring*
7	Pin Insert
8	Snap Ring
9	Body Bearing
10	Plate Bearing
11	Spring Bearing

\* Independent spring in valve sizes 6" and larger.

Because Duo-Chek® Retainerless Check valves have no body penetrations, potential leak paths through the valve are eliminated. This makes the Retainerless Check ideally suited to meet the following critical service applications:

- Hydrocarbon processing
- Chemical processing
- Any industry concerned with fire hazards or environmental safety

Key features of the Duo-Chek® Retainerless Check valve Style H include:

- A wide selection of body and plate materials
- A choice of metal-to-metal or resilient sealing
- A full range of pressure classes and sizes
- A variety of end connections
- Designs available include wafer, lug and double flange
- Internals easily removed for field replacement under normal inspections and maintenance procedures

The advanced design of the Duo-Chek® provides many operational benefits to the user, which combined with its more compact size and lower weight, make the Duo-Chek® Retainerless Check valve Style H an excellent alternative to a standard swing check valve.

Remarkable advantages include:

- Independent spring action (on 6" and larger) and plate suspension on larger valves
- Free release flat seats
- Springs provide superior response to flow reversal or deceleration
- Minimal water hammer
- Savings in purchase price and installation costs compared to a conventional swing check valve
- Single body design with no body cartridge

† Installation dimensions for these valves are as shown on pages 13-14.

## Dimensions

### Wafer Styles G (Retainered) and H (Retainerless)

Wafer body valves are designed with flangeless bodies with short face-to-face dimensions per API 594. They are clamped between mating flanges which are connected by studs and nuts.

**ASME Class 125 (Cast Iron valves only)**

Duo-Chek® valves are available in accordance with DIN, BS, JIS, AS and ISO Dimensions. For other sizes and pressure classes contact factory. Class 125 face-to-face dimensions 2 1/2"-12" are thinner than the requirements of API 594.

♦These G Style valve dimensions do not meet API 594, please consult factory.

## Dimensions

### Style H Double Flange Retainerless

**Double Flanged Style Valves** bolt up similar to a bolted cap swing check or gate valve. Double flanged versions are offered as standard on larger size valves where the lay length of the body permits installation of two heavy nuts between the flanges. These valves are standard retainerless design.

Pin must be vertical  
for horizontal flow.

**Notes:**

- Sizes not available in double flange design are offered as lug body design, see page 16.
- Please consult factory for other sizes and pressure classes available.
- Consult factory for dimensions and weights not shown.

## Dimensions

### Style H Lug Retainerless

**Lug Style valves** cover the bolting the entire length of the body. Lug valves are furnished in scallop and full body designs. Scallop is furnished whenever possible to keep weight to a minimum. These valves are standard retainerless design. Lug valves are furnished with thru-hole bolting in accordance with API 594. Threaded bolt holes are available but non standard as valve is not designed nor should be used for dead-end service.

## Dimensions

### Style X Extended Body Wafer Check

The "Extended Body" version of the Duo-Chek® was designed for extremely fast opening conditions. These types of applications are generally associated with compressed gas or steam that causes damage from the explosive opening effect on the closure mechanism. This damage can render them inoperative. This is especially true with slow response valves such as swing and tilting disc check valves.

The Style X body design has special geometry and plate configuration to allow each plate to strike the stop pin in its center of percussion. To absorb high impacts, the stop pin and hinge lugs are oversized.

Typical applications include centrifugal compressor discharge where compressors are subject to "surging", air separation plants, pipelines where compressors are mounted in parallel, and steam extraction. Style X Duo-Chek® valves are generally not required for liquid applications.

Pin must be vertical for horizontal flow.

Flow Direction

## Technical Data

### Valve Coefficient Cv and Average Spring Force (Class 125 - 300)

Valve Size		Cv	Spring Force (psi)
in	mm		
2"	50	75	0.23
2 1/2"	65	95	0.26
3"	80	191	0.21
4"	100	377	0.22
5"	127	483	0.18
6"	150	821	0.14
8"	200	1,590	0.19
10"	250	2,920	0.18
12"	300	4,470	0.17
14"	350	5,870	0.15
16"	400	8,690	0.16
18"	450	10,940	0.15
20"	500	14,290	0.13
24"	600	23,000	0.10
30"	750	37,200	0.08
36"	900	59,000	0.08
42"	1050	92,000	0.05
48"	1200	126,000	0.06
54"	1350	186,000	-
60"	1500	217,000	-
66"	1650	280,000	-
72"	1800	350,000	-

- Coefficients for sizes above 72" please consult factory.
- Spring Force is an estimate of the pressure required to overcome the spring when valve is closed. This is not exact as valve cannot be used as a relief valve.
- Valves 6" and larger have independent springs.

### Pressure Loss Information

- The curves show pressure loss available with the Duo-Chek® in horizontal flow.
- Duo-Chek® valves should be installed in horizontal flow with pins vertical for best performance. For other installations, contact the factory.
- Each piping system has a unique geometry which should be evaluated whenever the liquid media velocity exceeds 8 feet/second (2.4m/sec) through a swage or expansion (15° or greater included angle) directly upstream of the valve. Where practicable, **for maximum service life, and based on actual service**, a minimum of one (1) to five (5) pipe diameters distance should be maintained between the valve and the pump discharge and pipe fittings (swages or expansion).
- Systems with drastic flow decelerations may require higher torque springs for faster valve response and to reduce water hammer for non-slam applications. Please consult the factory.
- We can evaluate Duo-Chek® valves relative to your system behavior.

### Pressure Loss Chart (Class 125 - 300)

## Additional Engineered Check Products

### Noz-Chek®

#### Full Body Nozzle Check Valves

- Sizes 2" – 84"
- ASME Classes 150 – 4500
- Flanged, Hub-End, Weld-End
- Iron, Steel, and Stainless Steel
- ASME, DIN, JIS Standards

### Uni-Chek®

#### Single-Disc Check Valves

- Sizes 2" – 36"
- ASME Classes 125 – 300
- Flanged, Plain, or Serrated Ends
- Cast Iron, Carbon Steel, and Stainless Steel
- Variety of external shaft options available

### Compac-Noz®

#### Compact Body Nozzle Check Valves

- Sizes 12" – 60"
- ASME Classes 150 – 4500
- Flanged, Hub-End, Weld-End
- Iron, Steel, and Stainless Steel
- ASME, DIN, JIS Standards

### Krombach®

#### Steam Extraction Check Valves

- Sizes 6" – 72"
- ASME Classes 150 – 300
- Double Flanged & Butt Weld Ends
- Steel, Stainless Steel and Welded Design
